Description

Introducing the newest addition to our Wire Stripper Line.

The WS-45 uses a 1/2 HP motor to turn a gear-box which turns a Grooved V Pulley. Has a Frame made of aircraft aluminum.

The machine will strip wire from **14 Gauge to as large as 500 MCM** solid core or stranded at approximately 110 Feet per minute.

Feeds automatically through one of 3 different sized feed holes, and top wheel is adjustable to wire size.

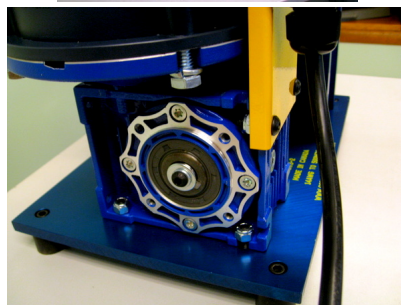

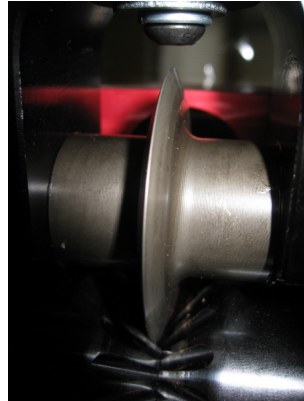

Machine weighs only 45 pounds, easily transport to job site or mount to work bench.

Uses standard 110V household current. Blade can easily be re-sharpened.

We are the leading dealer of **Recycling Machinery** in the US, and **stand behind this machine 100%**.

Be careful of imported imitations. This is a solid machine, which uses a hardened steel blade, and will give you years of use and make you plenty of money.

Stripped wire generally bring 2-3 times more at the scrap yard over "dirty" insulated wire.
